... SQL ASSIGNMENT ...

DDL ("Data Definition Language")

- I first created a database using the CREATE command, which belongs to DDL.
- That database's name is 'employee'.
- I created tables inside the database.
- Tables names "departments", "employees", "locations".
- I created multiple columns with data types and constraints.

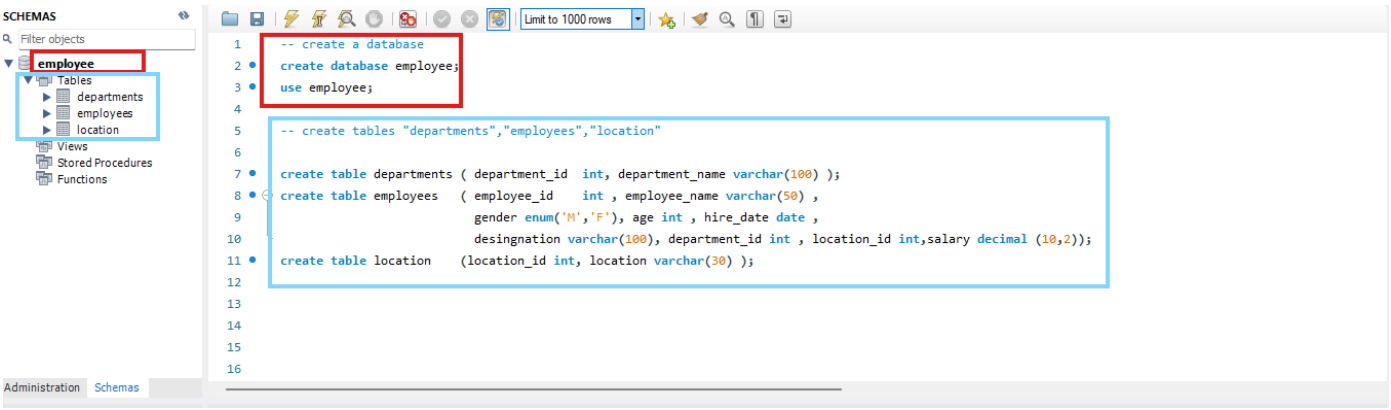

Create ---- I used the CREATE command to create a database and tables.

Alter ---- I used the ALTER command to modify tables and columns, and the RENAME command to change names.

Rename ---- I used the RENAME command to change the names of tables.

Drop ---- I used the DROP command to delete databases and tables.

1.CREATE.....

2.ALTER.....

```
create table departments ( department_id  int, department_name varchar(100) );
create table employees   ( employee_id    int , employee_name varchar(50) ,
                           gender enum('M','F'), age int , hire_date date ,
                           designation varchar(100), department_id int , location_id int,salary decimal (10,2));
create table location    (location_id int, location varchar(30) );
```

```
-- table alteration (ALTER)

alter table employees add column email varchar(40);
alter table employees modify column designation varchar(150)
alter table employees drop column age;
alter table employees rename column  hire_date to date_of_joining;
```

3.RENAME....
